# Assignment 2

Desing a similar calculator as shown in the image above using flex. You do not have to use the same colors for boxes, make it more attractive using the following

1) Colors
2) Shadows
3) Hover effect on buttons

Calculator buttons should be done by using an input tag of type *button* and the output box should be an input tag of type *text*.

FYI: We studied both of these in the first lecture, you can use that and add CSS to those.
